<https://www.linkedin.com/in/manoj-thakur-801030213/>

Innovative and detail-driven technical writer with 9+ years of experience crafting developer-facing documentation, executable sample code, and scalable documentation systems across cloud, data, and simulation platforms. Expert in bridging the gap between engineering complexity and developer clarity—producing reference implementations, API guides, CI/CD workflows, and onboarding templates that reduce time-to-first-success. Skilled in validating APIs through real code, integrating AI-assisted tools (GitHub Copilot, ChatGPT), and designing documentation pipelines that scale across distributed teams.

Core Skills

Documentation:	API/SDK docs, Developer Docs, Reference implementations, Code samples, Developer onboarding, UX Writing, How-to Guides, FAQ Guides
Programming & Tools:	Python, Java, SQL, Bash, GitHub Actions, GitLab CI/CD, Docker, Oxygen XML Editor, Madcap Flare, Adobe Framemaker
Authoring & Workflow:	Markdown, Docs-as-Code, VS Code, Docusaurus, YAML/JSON, OpenAPI, Postman, Swagger
Automation & Quality:	CI validations, Build scripts, Doc testing, AI-assisted content generation
Collaboration & Systems:	GitHub, GitLab, Confluence, Jira, Figma, Notion, REST APIs, Data Pipelines
AI & Productivity:	GitHub Copilot, ChatGPT, Microsoft Copilot, Code interpreter for validation and content QA
Operating System:	Windows, Ubuntu, iOS

Experience

JUN 2025 – TILL DATE

Technical Writer | Zoxx Headquarters | Foster City, California

- Produced comprehensive developer documentation for simulation SDKs and diagnostic APIs, focusing on real-time data streaming and robotic simulation workflows.
- Created and developed manufacturing work instructions, service manuals and diagnostics documentation.
- Authored Python and C++ reference modules demonstrating API usage, sensor data processing, and event-driven architecture patterns.
- Created developer onboarding templates and integration guides, reducing time-to-first-success for new contributors.
- Utilized AI-driven intelligence tool to enhance the tone and accuracy of the documentation.
- Collaborated with engineers to refine SDK packaging, release notes, and CI integration, ensuring alignment between docs and code releases.

- Authored How-to and FAQ content addressing recurring developer support queries, reducing Slack ticket volume by 25%.
-

NOV 2024 – JUN 2025

Technical Writer | Indeed | Austin, Texas (Remote)

- Authored and maintained developer documentation for Analyze, Orchestrate, Discover, Trino, and IQL APIs, combining executable Python, Java, and SQL examples with OpenAPI schemas and workflow diagrams.
- Built Python-based validation scripts to test REST endpoints, OAuth 2.0 authentication, and data integration pipelines across microservices.
- Maintained GitLab CI/CD pipelines that automatically lint Markdown, run code validations, and verify schema integrity against live API endpoints.
- Developed starter templates and reusable integration patterns to accelerate developer onboarding, reducing setup time by 40%.
- Partnered with platform engineers to auto-generate API docs from OpenAPI 3.0 specs and integrate doc builds into continuous deployment workflows.
- Utilized GitHub Copilot, ChatGPT, and Microsoft Copilot to enhance code quality, automate doc generation, and detect API inconsistencies.
- Authored developer onboarding, How-to, and FAQ guides, simplifying common troubleshooting and integration issues.
- Created architecture diagrams and data-flow visualizations using Figma and Visio to document system dependencies and service communication paths.
- Built Power BI dashboards to measure doc adoption, broken link counts, and usage metrics for continuous improvement.

JUN 2014 – JUL 2022

Senior Technical Writer (Client engagements) | Cadex Studec Technologies | Bengaluru, India

Client: Siemens Healthineers | Jan 2021 – Jul 2022

- Re-architected integration and service documentation into API/SDK-based developer guides with executable Python and Java examples.
- Built Python validation scripts to test REST API calls and ensure interoperability across distributed data exchange endpoints.
- Managed docs-as-code pipelines in GitHub and Veeva Vault, integrating CI checks, multi-language publishing, and structured metadata tagging.
- Authored developer onboarding and configuration templates improving reuse and consistency across SDK deliverables.

Client: Intel Corporation | Dec 2019 – Jan 2021

- Developed developer-facing content for semiconductor automation SDKs, documenting C++ class libraries, Python wrappers, and CLI utilities.
- Implemented GitLab CI/CD pipelines for automated doc builds, schema validation, and API change detection.
- Partnered with embedded software engineers to build reference applications demonstrating SDK integration for process control and calibration.

- Authored How-to and API usage examples verified against production SDK releases.

Client: *Kia Motors* | **Oct 2017 – Dec 2019**

- Created diagnostic API documentation and integration guides for connected-vehicle systems using REST and CAN/LIN protocols.
- Developed Python and Bash scripts to simulate API requests, validate endpoints, and benchmark diagnostic data flow.
- Managed Windchill-based content workflows and SharePoint integration to align SDK documentation with software-release cycles.
- Authored developer onboarding FAQs and “getting-started” content for vehicle-diagnostics API users.

Client: *Airbus* | **Jun 2014 – Oct 2017**

- Developed developer documentation for internal maintenance SDKs and XML-based data-exchange APIs.
- Built automated publishing workflows using Python and Arbortext scripting to validate XML schemas and automate doc builds.
- Designed SDK documentation templates and reusable Markdown patterns supporting multiple build configurations.
- Collaborated with developers to standardize code-comment extraction into API reference outputs.

Education

MAY 2024

Master of Information Technology | California Lutheran University | Thousand Oaks, California | **3.69 GPA**

MAY 2014

Bachelor of Aviation Technology | Singhania University | Rajasthan, India | **3.5 GPA**

AWARDS & ACHIEVEMENTS

- Promoted to Technical Data Engineer/Proofreading within two years for quality and performance.
- Three consecutive quality/on-time delivery awards.
- Introduced peer-review process, improving accuracy and reducing documentation errors by 15%.
- Re-architected the Data Platforms information hierarchy: standardized taxonomy, navigation IA, and versioning; improved findability and reduced duplication, lowering external support asks by 25%.

Certifications

XML Essential Training (LinkedIn Learning) • Career Essentials in Data Analysis (Microsoft/LinkedIn) • Power BI Data Methods (PML/LinkedIn) • Tableau Essential Training (NASBA/LinkedIn)

Activities

Gardening • Cooking • Hiking • Love Anime • Travel
